ORTHOPAEDIC
SURGICAL INSTRUMENTS

" We produce for your health... "

ortimplant

"We produce for your health..."

Ortimplant provides a complete platform of trauma & spinal products for upper, lower extremity & spine that covers all the long and small bones injuries for the femur, tibia, fibula clavicle, humerus, radius, ulna, hand & foot bones, spine... etc.

Plates & Screws Small Fragment

DHS - DCS Plates

Plates & Screw Mini Fragment

Screws & Splints, Chest Wall Plate

Pediatric Plates & Angled Blade Plates

TRAUMA PRODUCTS

We produce superior designed and functional products made off ISO 5832 - 1 Stainless teel and ISO 5832 - 3 Titanium high quality raw materials, suitable with human anatomy and meticulous quality standart

TRAUMA INSTRUMENT SETS

ORTHOPAEDIC surgery instrument sets, including carefully designed aluminum boxes, silicone holders suitable for the placement of the surgical instruments for all ORTHOPAEDIC surgeries, provide great convenience to surgeons during surgery

ORTHOPAEDIC SURGICAL INSTRUMENTS

We develop and produce ergonomic, convenient and functional, stainless steel ORTHOPAEDIC surgical instruments which increase the success of surgical procedures

STERILIZATION CONTAINERS

We produce aluminum sterilization containers suitable for all surgical sets which are convenient, hygienic, safe & which can be used without wrapping with surgical textiles and which can maintain sterilization safety for a long time

STERILIZATION BASKETS

We produce perforated stainless steel baskets suitable for all sets of surgical instruments that can be used in sterilization containers or alone

ORTHOPAEDIC STERILIZATION CONTAINERS

Aluminum perforated boxes, screw racks, silicone holders, surgical instrument trays are produced for all surgical instrument sets, which allow the ORTHOPAEDIC surgical instruments to be stored, transported and sterilized by wrapping surgical textile

"With its obsessive Quality policy...."

With its obsessive quality policy and with its open structure to development. Ortimplant goes on its constitution under today's modern instutional structure

Trochanteric Plates & Cable System

Cannulated Screws

Headless, Herbert Screws

Intramedullary Nails

Elastic Nails

Spinal Systems

External Fixators

Wires, Pins, Staples & Drill Bits

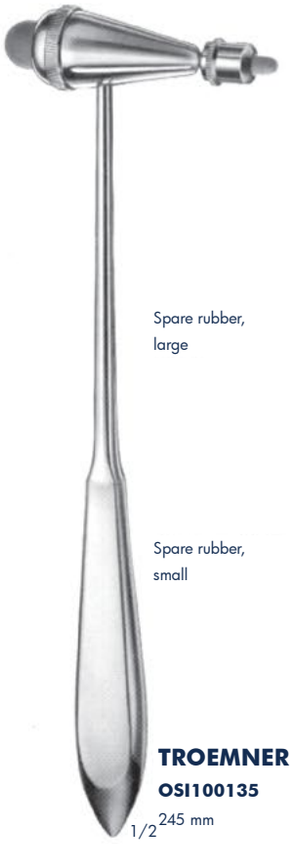

Our expert team has years of experience in development of business and strategy..

From raw materials to services after sales, Ortimplant considers to apply Total Quality Management System, With respect to this policy Ortimplant has been certified its Quality with the certificates of CE, ISO 9001 2000, ISO 13485

190 mm

Micro Scissors (Spring Type) with round handles

... with round handles
Round handles allow turning manipulations between the fingers.
Optimum balance individually for each instrument due to solid or hollowed-out handles.

OSI110514

Micro dissecting scissors

OSI110512 - OSI 110514
145 mm

Micro Scissors (Spring Type) with light plastic handle

micro instruments with new, light plastic profile

- The new, light plastic profile increases the grip surface, thus guaranteeing an uncramped hand position and providing enhanced sensitivity.
- The round grip cross-section permits easy and uniform turning of the instrument. This extends the application and working areas.
- The easy-grip studded profile guarantees a secure hold for all movements.
- Development in Accordance with ergonomic criteria and the low weight of the new plastic grips are factors which create the preconditions for fatigue-free working and optimum handling.

170 mm

Micro Scissors (Spring Type) bayonet - shaped

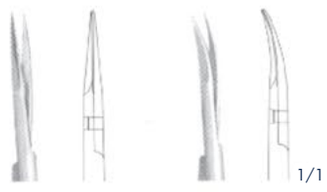

... with YASARGIL Profile Handles

- According to the length of the instrument there are several bore holes which ensure an equally safe grip in the front, middle or rear part of the handle and compared with former patterns the instrument is much more balanced.
- Differing from former patterns, instruments with short working ends have now longer handles and springs thus guaranteeing the best hold.
- The bore holes in the handles allow reliable gripping and holding of the instrument which is of importance for deep surger.
- Reduction of weight due to the bore holes.

MÜLLER Micro Forceps with light weight plastic handle

Müller micro instruments with new, light plastic profile

- The new light plastic profile increases the grip surface, thus guaranteeing an uncramped hand position and providing enchanced sensitivity.
- The round grip cross-section permits easy and uniform turning of the instrument. This extends the application and working areas.
- The easy-grip studded profile guarantees a secure hold for all movements.
- Decelopment in Accordance with ergonomic criteria and the low weight of the new plastic grips are factors which create the preconditions for fatigue-free working and optimum handing.

Micro Forceps, bayonet - Shaped

... with YASARGIL Profile Handles

- According to the length of the instrument there are several bore holes which ensure an equally safe grip in the front, middle or rear of the handle and compared with former patterns the instrument is much more balanced.
- Differing from former patterns, instruments with short working ends have now longer handles and springs thus guaranteeing the best hold.
- The bore holes in the handles allow reliable gripping and holding of the instrument which is of importance for deep surgery.
- Reduction of weight due to the bore holes.

BIEMER - MÜLLER, Approximators

for micro vessel anastomosis in the superficial range

- Blade gripping surface with oblique serrations for careful but safe holding of the vessel ends.
- No risk due to rigidly fixed pressure measure.
- Adjustable distance between the clips and automatic fixation by tilting.
- Even when applied, the lightweight construction allows easy, distortionless turning and makes suturing possible on the other side of the vessel.

Micro approximators					
		Opening	Length of jaws	Closing Force	Applying Forceps
OSI130381		5 mm	9 mm	25 - 30 g (0,25 - 0,29 N)	**OSI130374** **or** **OSI130375** (siehe S. 214, look on p.2014)
OSI130382		5 mm	9 mm

145 mm

Approximators BIEMER Approximators for nerves

for micro vessel anastomosis in the deeper range, also for experimental surgery

- Blade gripping surface with oblique serrations for careful but safe holding of the vessel ends.
- The pressure measure is adjusted with key
- The distance between the clips is variable and fixed with key

1/1

OSI130388
Approximator for complete, with key

for safe adaption of nerve anastomoses

- Piercing the nerve centre with fine needles prevents strong pathological changes.
- Needles can be exchanged with key
- Distance between the needles is variable and can be fixed with key

MÜLLER Vascular Clips

MÜLLER Vascular Clips

Features:

- Atraumatic mouth profile
- Handle plateaux mounted on both sides for secure application and removal of the clip.
- Exactly defined closing pressure for arterial and venous vessels.
- Vascular clips are clearly marked with closing pressure.
- Closed mouth box guarantees precise guidance of the working tips.
- No risk of threads getting tangled up in clip.

Needle Holders

needle holders have jaws with carbide inserts and According to the use required the reps. structure can be chosen. A smooth jaw surface as well as 3 different serrations guarantee a sure ,,grip" of the resp. needle.

We recommend carbide inserts

with smooth jaw surface for suture material	9/0 - 11/0
with 0.2 mm pitch of serration for suture material	6/0 - 10/0
0.4 mm	4/0 - 6/0
0.5 mm	up to 3/0

Needle Holders with carbide inserts
Identification:
gold-plated rings, handle ends and ratchets

with smooth jaws

Iliac Retractor

consisting of:

OSI150770	Sperrer allein Retractor only
OSI150771	Retractor blade lateral, 30 x 30 mm
OSI150772	Retractor blade medial, 90 x 30 mm

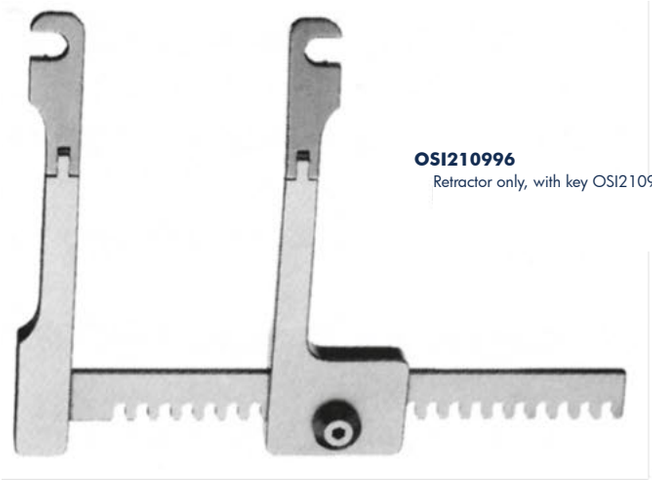

OSI150773

Forceps for changing the blades

Retractor system for optimal approach to the arteria iliaca communis. The retractor blades are made out of titanium and therefore they are radiotransparent. The big medial retractor blade can be gradually adjusted during the operation. Because of the blades which are easy to exchange the retractor system can be used for the left and right side.

HELLER

OSI230522

Biopsy forceps for papilla

Biopsy Forceps for transduodenal papillotomy

Application:
In papillotomy the malleable probe is introduced from choledochotomy into duodenum in the conventional way. Lifting the papille into the duodenum wound is done with the cone, available in size 6, 8 and 10 mm diam. Then the forceps is intro-duced into the groove of the cone and pushed forward. By closing the forceps jaws, incision is achieved with simultaneous biopsy. The biopsy taken remains in the “basket” and can eOSIly be removed.

Circumcision Clamps

WINKELMANN

OSI230434 ∅ 12 mm
OSI230435 ∅ 16 mm
OSI230436 ∅ 20 mm

Circumcision clamps

Assisted by two haemostats or ligatures the foreskin is pushed over the bellshaped, protection-rod and the glans is placed into it.
By now, the wing-nut is tightened as close as possible, so the foreskin is annular compressed. The foreskin is cut off with a scalpel, right next to the compression ring.
The circumcision clamps remains a few minutes to avoid bleeding. In case that any large vein, specially the frenular artery, is cut through, a ligature must be set.
The advantage of the method described is the cosmeticly favourable scar which is left after rejection of the small necrotized portion.

Biopsy Forceps

Forceps applied to the portio vaginalis uteri. The excellent hooking effect can be seen.

Forceps applied to cicatricially altered flat vaginal vault.

1/1
OSI240414

1/1
OSI240415

1/2

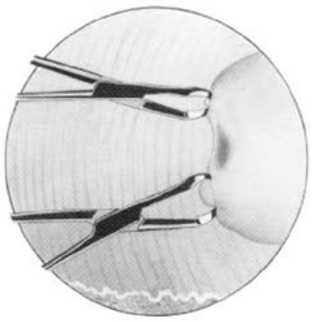

SCHUMACHER
OSI240414 - OSI240415
240 mm

Advantages of the Schumacher forceps:
More reliable grip on the tissue due to new "hooking" effect.
Wide angle of opening. Smooth, steady cut. Specimens are not squashed.
Not painful; self-sealing wound, heals well.

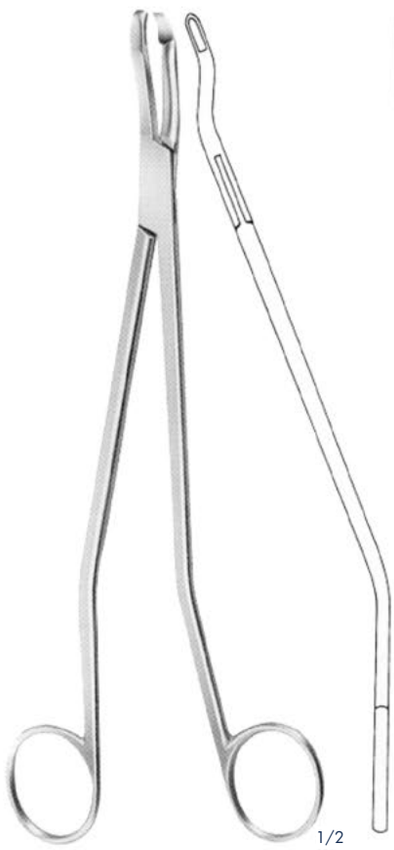

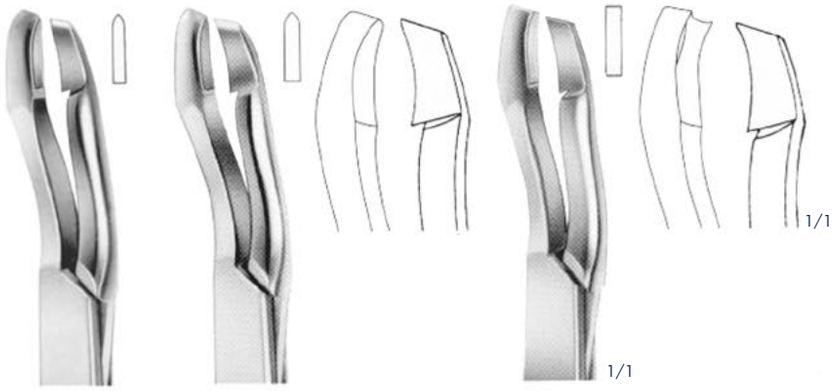

SCHUMACHER
OSI240290 - OSI240291
suitable for colposcopy

Biopsy Forceps

The size of the biopsy is determined by the opening angle of the forceps. The hook effect of the curved jaws allows tissue removal and an additional hook forceps is hardly ever necessary.

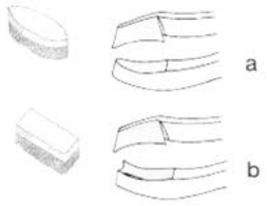

OSI240416
2,0 mm

OSI240417
2,4 mm

OSI240418
2,4 mm

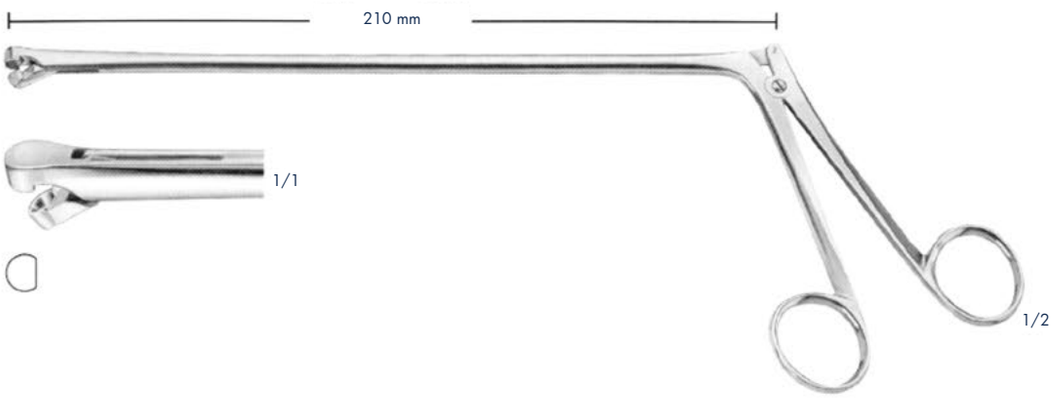

2 different shapes of the jaw are avaible:
a) gothic shape
(causes less bleeding)
2.0 resp. 2.4 mm wide
b) rectangular shape, 2.4 mm wide
The smooth vertical cut through the epithelium and fibrous tissue allows an immadiate histological examination. The biopsy is laterally fixed to a plane support (e.g. cork) and can thus properly be embedded for intersection. No tangential incisions.
The bayonet-shape of the forceps does neither obstruct the view to the portio nor to the area of biopsy, no matter whether a colposcope is used or not. Application of the forceps can be well controlled.

134°C Autoclavable

Function:
The vacuum required can be constantly preset by the adjusting screw. This vacuum exists then up to the closed quick-shutter, thus the vacuum in the suction head is immediately put under the preset vacuum. In case the adjusting screw. For immediate removal of the suction head simply close the quickshutter, thus the vacuum in the suction head is eliminated at once whereas the vacuum in the section jar remains unchanged.

OSI240644
Guide sheath
175 mm

OSI240645
Injection needle
luer-Lock hub
1,0 x 185 mm

Special set for transvaginal injection for paracervical anaesthesie as well as anaesthesia of the pdendus

When the guide sheath is introduced at the spot to be injected the needle (mounted on the syringe) is then passed through the guide sheath and the tissue is finally injected.

Injuries of the vagina are thus avoided. Depth of puncture is limited to 10 mm

Thumb ring as well as a small support for middle- or forefinger facilitate the handling. Thumb ring slides on the guide sheath and can be fixed by a knurled nut to any size of the hand. The finger support can be turned round on the guide sheath so left-handers can use it, too. Completely away from the range of actions is the finger support when it is moved towards the thumb ring, e.g. for anaesthesia of the pudendus.

540 mm

OSI200345

Bulldog clamp

40 mm

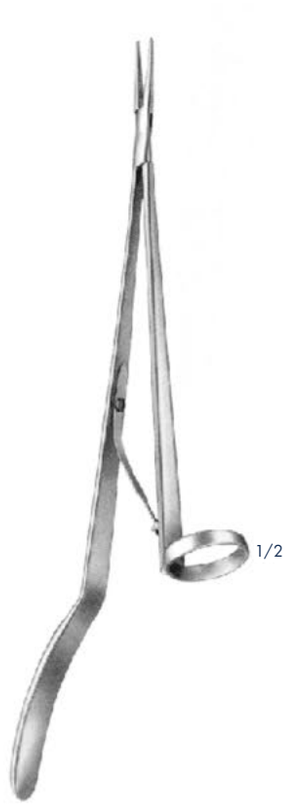

The slight curvature of the introducer forceps permits optimal handling during tunneling. Here the prothesis can be drawn in by applying the introducer forceps directly to the prothesis (alloplastic prothesis) or can be drawn in by means of the bulldog clamp (autologous/homologous prothesis). Thanks to the interlocking fit, the bulldog clamp rests non-displaceable and securely in the mouth of the introducer forceps.

Instruments Acc. To HELLBERG/KUPKA, ergonomic handle

These instruments provide the surgeon with a maximum of ergonomical comfor.
The optimized design of the Instruments offers a fatigue-free working especially with regard to difficult suture and anastomosis techniques.

MÜLLER Vascular Clips

MÜLLER Vascular Clips

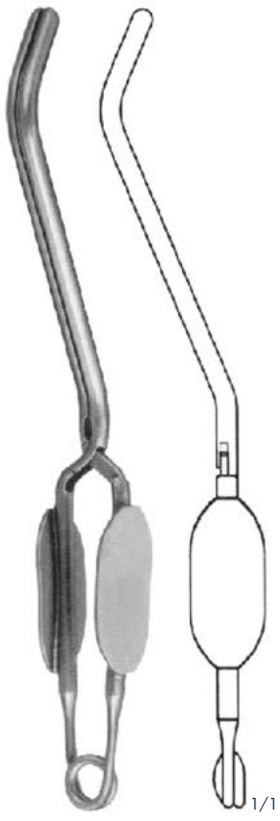

Features:
-Atraumatic mouth profile.
-Handle plateaux mounted on both sides for secure application and removal of the clip.
-Exactly defined closing pressure for arterial and venous vessels. Vascular clips are clearly marked with closing pressure.
-Closed mouth box gaurantees precise guidance of the working tips. No risk of thereads getting tangled up in clip

WAGNER

OSI180310 - OSI180315

Long handled thin concave osteotomes for removal of osteophytes as well as for creating small notches throughout the Acetabular surface.
The instruments can also be used for removing bone cement from the marrow-cavity when removing a total hip prosthesis.

Plaster Shears

Special features:
The construction of the open jaws avoids tiresome clogging by plaster remnants and allows furthermore an easy cleaning.
The shears do not glide off the plaster owing to the deep teething on the jaws.
The knives with hollow grinding have a better cutting ability and therefore less force is required.
The knives are guided by ball bearings.

Standard tubes with inner tube and tape, especially for permanent wearers after removal of the larynx (inside diameter measured on the most narrow part of standard tube)

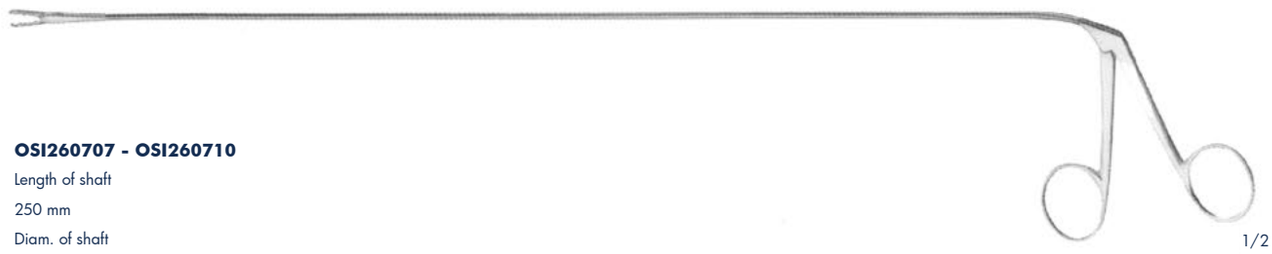

Cleaning and maintenance:
in lukewarm water, if necessary with soap, do not boil!
Keep inner tube sliding with traces of paraffin oil
or slicon-spray

Disingection:
with the usual disingectants

Sterilisation:
with ethylene oxide (gas sterilization)
